INTRODUCTION

The DM3600 is an intelligent digital panel meter that can accept inputs from a wide variety of sensors and display the signal digitally. In addition, it has the facility to accept up to two option 'Pods' which can be either isolated (4 to 20) mA re-transmission or two alarm relays.

The DM3600 is available in two models. The DM3600U which is a universal input panel indicator and the DM3600A, a universal panel indicator with totaliser functions.

All functions are programmable via the integral front panel keys or via the optional RS485 serial communications port using the Modbus protocol.

The DM3600 supports TFML (Transfer Function Module Library) i.e the ability to download custom functionality by means of standard modules available from the web site. This allows pre-written or custom control functions to be quickly and easily incorporated.

The DM3600A totaliser function enables non-volatile storage of the integrated total to be maintained within the unit, even after loss of power. Output options can be selected to operate on Process Variable (PV) or Total.

TRANSFER FUNCTION MODULE LIBRARY (TFML)
TFML has been designed to offer the user enhanced power and flexibility by providing a mechanism whereby each unit can be customised to perform a particular function.

Common Modules are listed below and are available from our website www.status.co.uk. They are simply down-loaded into the DM3600 unit.

TRANSFER FUNCTION MODULE LIBRARY PROGRAMS INCLUDE:
✓ PID control
✓ Rate of change limiter
✓ Peak Hold
✓ Valley Hold
✓ 3-Step control
✓ Pump lift station control
✓ Level with density compensation
  ...and many more can be seen at www.status.co.uk

We can write a TFML function specifically for your process. Please contact our sales office for details

COMMUNICATIONS OPTION 01

RS485 MODBUS COMMUNICATIONS

DM3600 is available with RS485 serial communications using MODBUS RTU protocol, and is compatible with the vast majority of software platforms used in the process control industry.

Physical Layer	4 wire or 2 wire half duplex RS485
Protocol	Modbus RTU format Isolation 500 VAC
Maximum Fan out	32 units (can be increased with repeaters)
Termination Standard	RS485

M-CONFIG

With the RS485 Modbus serial communications option fitted, remote programming and interrogation can be performed from a PC. To facilitate this Status Instruments have written a comprehensive, easy to use, configuration software program called M-Config, which is available *free of charge* from our web site www.status.co.uk This program also communicates with the Medacs back of panel range.

Also available are RS232/485 convertors to convert the RS232 normally standard on PC computers to the more industrial RS485 suitable for multidrop applications over long distances. Contact Sales for details.
M-SCADA

M-Scada software is available in 2 versions, Lite for up to 50 tags, and Professional for up to 100 tags. The Scada package integrates with Medacs and the DM3000 series and provides a cost effective way of constructing a powerful control and monitoring system.

APPLICATIONS

DM3600 can be used as an indicating trip-amp, interfacing with a wide range of field devices. This is often preferred by operators, as calibration or alarm set-point changes can be made easily and confirmed on the display.
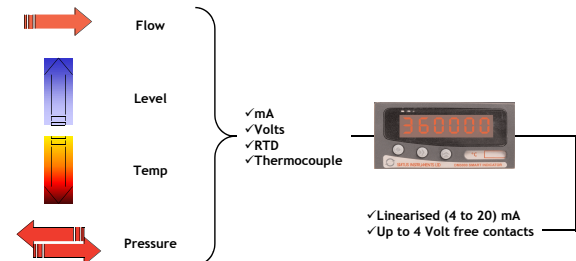

DM3600 can linearise, with up to 60 co-ordinate pairs for straight line interpolation, or up to a 15th order polynomial for highest accuracy. Alarms, local display etc are all standard.

✓(4 to 20) mA, (0 to 10) V etc
✓Field power supply

✓4-20mA Flow or head,
✓12 digit on board totaliser
✓pulse output for remote totalisation
✓Relay outputs on flow or head
✓Modbus communication

✓3/2 flow laws
✓5/2 Flow laws
✓Square root
✓Up to 60 co ordinate pairs
✓15th order polynomial

DM3600 can be used with almost any level sensor to measure "head" upstream of a flume or weir. Standard software allows power $^3/_2$ and $^5/_2$ flow linearisation, giving a (4 to 20) mA output proportional to flow, as well as pulsing a relay in multiples of flow rate to an external totaliser.

A standard TFML module can provide 3-step valve control based on flow.

The optional M-scada package can provide historic and real time trending.
